Shivani Barya

Bengaluru, Karnataka | 8290931348 | shivanibarya29@gmail.com | LinkedIn | GitHub | X

Professional Summary

DevOps and Cloud Engineering professional with hands-on experience building scalable AWS infrastructure and reliable deployment pipelines. Skilled in Infrastructure as Code, containerization, CI/CD, and cloud networking using Terraform, Docker, Kubernetes, and Jenkins. Experienced in creating multi-tier architectures and improving delivery stability through version-controlled workflows.

Core DevOps Stack

AWS • Docker • Kubernetes • Jenkins • Terraform • Git • Maven • SonarQube • Linux • Bash

Technical Skills

Cloud: AWS (EC2, S3, VPC, IAM, RDS, CloudFront, Lambda, EKS, ECS)
DevOps Tools: Jenkins, Git, GitHub, GitLab, Maven, Nexus, SonarQube
Containers & Orchestration: Docker, Kubernetes
Infrastructure as Code: Terraform
Scripting: Python, Bash, Groovy
Operating Systems: Linux (Ubuntu), Windows
Databases: MySQL, Amazon RDS
Networking: Subnetting, Routing, Security Groups, Load Balancers
Deployment Strategies: Blue-Green Deployment, Rolling Deployment

DevOps & Cloud Engineering Projects

Infrastructure as Code for AWS Provisioning using Terraform

Technologies: Terraform, AWS (VPC, EC2, S3, IAM), Git

- Provisioned AWS infrastructure using Terraform scripts for compute, storage, and identity services.
- Created reusable modules and variables to support scalable environment configuration.
- Maintained infrastructure version control using Git to ensure deployment consistency.
- Organized infrastructure configuration using modular Terraform components for reusable deployment environments.

CI/CD Pipeline for Containerized Application Deployment

Technologies: Jenkins, Git, Docker, Kubernetes, SonarQube

- Built a CI/CD workflow to manage application build, testing, and release processes.
- Connected Git repositories with Jenkins pipelines for continuous build execution.
- Integrated SonarQube to detect code defects and improve maintainability.

- Packaged applications using Docker and deployed workloads through Kubernetes orchestration.

Three-Tier Web Application Architecture on AWS

Technologies: AWS (VPC, EC2, RDS, ALB, Auto Scaling, IAM, S3)

- Developed a three-tier architecture separating presentation, application, and database layers.
- Strengthened application availability by distributing traffic through load balancing and scalable compute resources.
- Configured VPC networking, subnets, routing tables, and security groups.
- Implemented Application Load Balancer and Auto Scaling for traffic distribution and scalability.

Professional Experience

DevOps Trainee – Q-Spiders | **Jun 2025 – Feb 2026**

- Executed Jenkins pipelines integrated with Git repositories, reducing manual deployment effort by 60%.
- Utilized AWS services including EC2, S3, VPC, IAM, Lambda, and CloudWatch.
- Deployed containerized workloads using Docker and Kubernetes.

Education

Master of Computer Applications (Cloud Computing)

SAGE University, Bhopal | CGPA: 9.05 **2023 – 2025**

Bachelor of Science (Biotechnology)

Bundelkhand University, Jhansi | CGPA: 6.00 **2017 – 2020**

Certifications

- AWS Cloud Practitioner Essentials Certificate **Nov 2024**
- Fundamentals of Cloud Security Certificate **Sep 2024**
- Oracle Certified Foundations Associate Certificate **Sep 2024**

Key Achievements

- Secured first position in MCA third semester with SGPA 9.65.
- Maintained 100% attendance during MCA program.
- Deployed a production-ready three-tier architecture on AWS.
